Your kitchen design brief

Part 1: how the room needs to work

Complete what you know and leave undecided items for your designer. This is a planning aid, not a final technical specification or installation drawing.

Project context

Town/postcode, room type, extension or renovation, and any drawings available.

How you use the room

Who cooks, household routines, entertaining, seating and accessibility needs.

Storage priorities

Food, crockery, small appliances, waste sorting, pantry and items to keep on display.

Style and construction

Bespoke, in-frame, beaded Shaker or contemporary; colours, textures and reference images.

Layout priorities

Island or peninsula, preparation space, cooking, washing-up and movement through the room.

Explore our completed kitchens

Your kitchen specification

Part 2: decisions to confirm before an order

Cabinetry and internal fittings

Door construction, finish, handles, drawer inserts, pantry fittings and lighting.

Appliances and services

Preferred exact models; sink, tap and extraction. Ask the designer to coordinate service needs.

Worktops and surrounding finishes

Material preferences, thickness, edges, splashback, upstands and flooring interfaces.

Delivery, installation and other trades

Access, site readiness, responsibilities, dependencies and preferred timing.

Decisions still to make

Unconfirmed items, documents needed and the questions for your next design meeting.

Final dimensions, service positions, suitability and installation requirements must be checked by the responsible professionals before ordering or work begins.
